

Flight time ruler

Source: <http://erlendgausen.net>

Revision: 2004.08.29

This ruler might ease planning and rerouting on your VFR navigation flights, but remember to take prevailing winds into consideration.

Technical details:

- 110kts cruise speed
- 1:250.000 scale maps
- One minute equals 1,36cm on the map

For this to work, be sure to preserve the correct dimensions and print this document on a DIN A4 sheet without any scaling. In Acrobat reader, make sure page scaling: 'none' is selected in the print menu.
